

# IF STEPHEN HAWKING CAN DO IT, ANYONE CAN.

Stephen Hawking is a professor of theoretical physics  
applied mathematics and cosmology.

He has done groundbreaking research on black holes  
Quantum Theory and Einstein's General Theory of Relativity.

Professor Hawking has twelve honorary degrees and  
won countless awards, medals and science prizes.

He even wrote several worldwide bestsellers.

Moreover he has a loving family and  
a Motor Neurone Disease called Amyotrophic Lateral Sclerosis.

He can't move.

He can't talk.

He can barely blink an eye.

For Stephen Hawking, it all happens in the mind.

A place where content outruns form. A place where nothing is impossible.

So set your mind to what you want to do.

If a genius like Professor Hawking can do it, so can you.
